4 Chapter 1 Cooperative Distributed Multi-Agent Optimization Figure 11 Multiagent cooperative optimization problem where  $T: \mathbb{R}^m \rightarrow \mathbb{R}$  is an increasing convex function. The decision vector  $x$  is constrained to lie in a set,  $x \in C$ , which is a combination of local constraints and additional global constraints that may be imposed by the network structure, ie,

#### **Real-Time Convex Optimization in Signal Processing**

Convex optimization has a long history in signal processing, dating back to the 1960s. The history is described below in a little more detail; for some more recent applications, see for example the special issue of the IEEE Journal on Selected Topics in Signal Processing on convex optimization methods for signal processing [22].
